

GOVERNANCE AND ECONOMIC DEVELOPMENT

Building institutions that work for the people

Governance and Economic Development helps to ensure that institutions in our partner countries have the capacity to create an enabling environment for socio-economic growth.

WE BELIEVE

We believe that embedding ownership of the technical assistance in our partners' systems supports them in finding their own solutions and in developing, strengthening or discovering the skills needed to bring projects to a successful conclusion. Our goal is to help public institutions better serve the interests of their citizens and improve the quality of life.

Our mission in the area of governance support is to provide partner governments and institutions with the expertise and tools they need to facilitate entrepreneurship and to help remove barriers to sustainable socio-economic development.

WE ARE

Our Governance and Economic Development team is dedicated to developing and implementing technical assistance approaches that underpin sustainable economic and social development. Our holistic approach and deep understanding of the approaches to bring together governments, businesses and civil society organisations allows us to arrive at effective solutions to complex governance problems. Our team shares a passion for development and is dedicated to delivering tailor-made solutions for every project, country and context in which we work.

WE WORK

To ensure that the impact of our assistance is both comprehensive and effective, we implement projects at all levels - from the macro level of general development strategies, down to the micro level of strengthening local governance and individual businesses, while paying due attention to cross-cutting issues such as human resource development, gender equality, and environmental protection.

The private sector has vast untapped potential for driving equitable, socially-responsible development, and so technical assistance to private sector organisations is a key focus of our work. SMEs, in particular, are important sources of employment and income generation in developing countries and economies in transition.

We work with decision-makers and institutions to develop strategies and policies to support administrative and public-sector reforms that adhere to the principles of good governance, while at the same time engaging and promoting cooperation with non-state actors, businesses and civil society organisations.
